Serious logistical
problems

Basic math to win

Let us calculate the costs of returnables for a usual german household.

As basic information we take the image from bevore.

Basic math to win

Basic math to win

$$2,5\text{m} * 2,5\text{m} * 2\text{m} \\ = \\ 12,5\text{m}^3$$

Basic math to win

Peak storage: $\sim 12,5\text{m}^3$

Average: $\sim 6,25\text{m}^3$

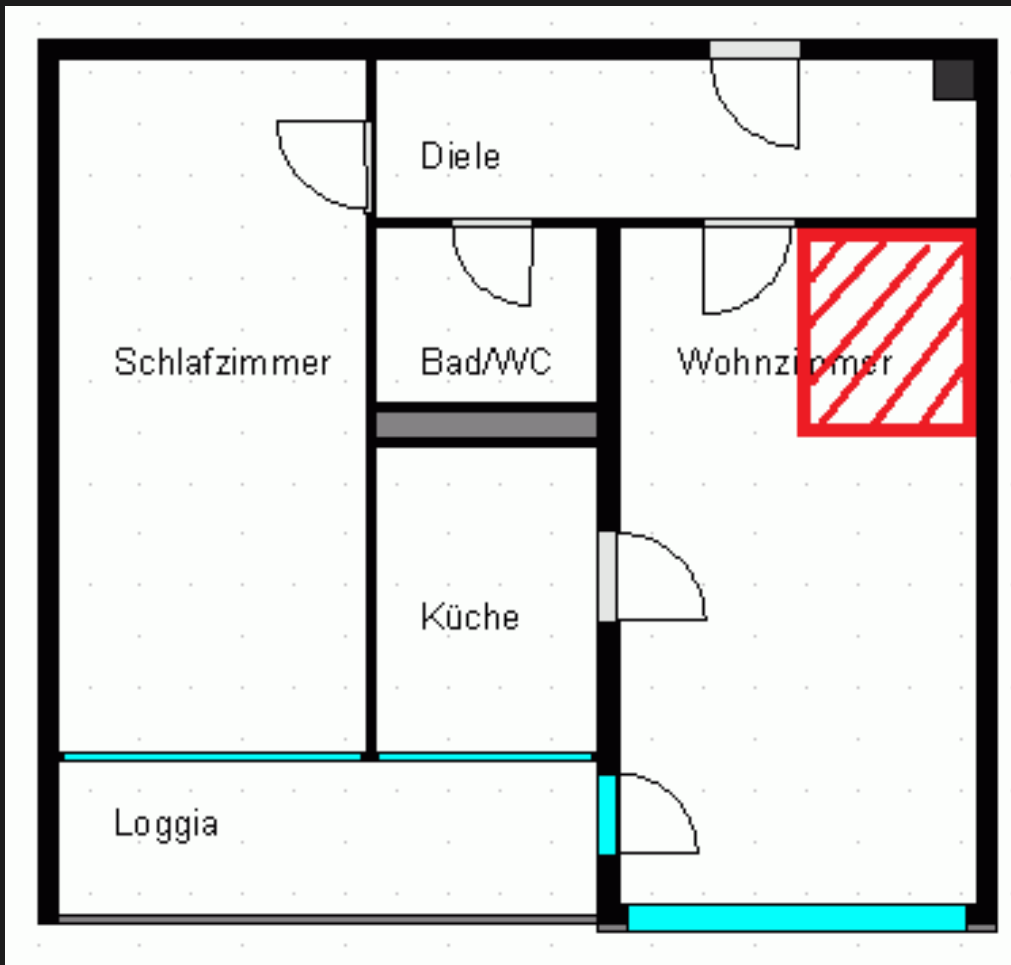

German room height: 2,75m

Basic math to win

Place reserved:
2,27m

Cost per m² in
Dresden: 7,89€

Costs:
18€ per month

Our app

Our app is based around people who will collect the returnable from others. If enough households do it there will be a function to get the most optimal way to collect returnables.
